I will be discussing ways of earning money online using Java. It's not difficult to do that, but you need patience and consistence while doing it as results may take some time. Let's deep dive into those ways one by one.

How to Earn Money Online using Java

1. Blogging

Blogging is an effective way of creating and publishing online. Having Java skills, you can create technology blogs writing about Java, it's uses, topics on java programming like loops, classes etc.

As a reader base builds over time, you can monetize your content through advertising platforms like Google AdSense, Facebook Audience Network. You can also pursue affiliated marketing to monetize your content.

There are a plenty of ways to start a blog. The most common for a beginner is to create a blog on Blogger. Though you can also create one by buying a hosting package, a domain name and using WordPress.

You can visit the below sites for starting your blogging career:

2. YouTube Channel

Creating content in a YouTube channel is more or less the same as blogging, except that you convey it in the form of videos. At first your focus should be to deliver quality content and build a subscriber base. Once your channel is doing well you can monetize it using AdSense, Facebook Audience Network etc.

Most often people prefer video over other forms as it's easier for them to understand by watching a video. You might get sponsors for your videos as your channel grows.

Create a YouTube channel now:

3. Selling Courses on Platforms like Udemy

Another popular way of earning money from your Java knowledge is creating courses and selling the courses online on platforms like Udemy, Skillshare etc.

These are popular platforms with millions of people learning various skills. By selling the courses on these platforms you can earn money when people buy your course.

In most of the cases, you just need to screen record your coding tutorials along with voice over. After recording all the videos, you can put them together in the form of a course and list them on these sites.

One thing to keep in mind is to make quality content so that people like them and also encourages them to purchase courses you may create next.

Visit Udemy by clicking the link:

4. Online Live Teaching

Since skills like coding are in demand now a days and Java being a popular language, you can teach people online using platforms like Zoom, Google Meet etc. You can charge them on per class basis.

You can also join some companies which provide online teaching services and provide services there. This reduces the burden of building the student base as they already have it.

5. Freelancing

You can take up projects on freelancing sites like Freelancer, Upwork etc. There, you bid for projects posted by clients and work on them. You get paid when you submit your work.

Now a days, many companies especially startups employ freelancers to implement tasks. You having the knowledge of Java can implement your skills and get paid for your work.
